

# POWER<sup>3</sup> MOBILE STORAGE SYSTEM FROM DEXION'S COMPACTUS STORAGE & FILING RANGE STACKS UP FOR LIBRARIANS & GOVERNMENT DEPARTMENTS.

Following its mid 2003 launch the new generation Power<sup>3</sup> Mobile Storage System from Dexion's Compactus Storage and Filing range of document storage solutions has gained rapid acceptance with corporate Australia, archivists, librarians, and government departments.

According to Andrew Angus, Dexion Australia's General Manager of Marketing and Franchise Systems Power<sup>3</sup> is ideal for the bulk storage of documents and operations where storage space is at a premium.

"Compared to static shelving we've found that mobile storage systems generally save from a third to a half in space terms with the big advantage being the removal of aisles" said Angus "and the new system features bases up to 12 meters long providing even greater storage capacity and spatial design flexibility".

The Power<sup>3</sup> Mobile Storage System from Dexion's Compactus Storage and Filing range is the result of extensive research of the global storage market and a \$10 million investment in the European manufacturing plant."

Dexion wanted to provide the Australian market with a quantum leap forward in terms of mobile storage systems and with the Power<sup>3</sup> system we've achieved that objective" he said.

"We're now providing the next generation of Compactus with functionality and safety features and preservation attributes that competitive products don't have".

The Power<sup>3</sup> System offers a wide range of operating functionality and safety features controlled through a "one touch key pad. The soft, slow start and stop ensures vibration-free safe movement, aisles containing sensitive material can be locked and widths varied to allow for overhanging material. The system also features a motor current monitoring system (MCMS) which ensures immediate shutdown if resistance is encountered. Other features offer unparalleled safety for operators.

The Power<sup>3</sup> System features Sysco boltless commercial shelving which is manufactured on a completely automated line at Dexion Holland. "Sysco is recognized as one of the leading shelving brands in the world providing highly engineered shelving and a quality finish" continued Angus.

The Power<sup>3</sup> System is an easy "one man install" with no hard wiring and

little or no maintenance required.

"We can now offer a world class product with acceptable lead times for such a high value capital item." Mr. Angus concluded.
