

Ultima™ CI-80

modular and versatile

Ultima™ CI-80 is the most complete adjustable shelving package and small part storage system available

Dexion Australia has now launched its Ultima™ Shelving Series, a complete and integrated shelving range. The range includes four different shelving systems, each designed to solve different storage challenges.

The all-new Ultima CI-80, a completely modular shelving and small parts storage system, replaces Dexion's Spandex industrial and Plan D commercial shelving ranges.

Ultima CI-80 is designed to look equally at home in a typical industrial application or the office environment. Features include:

- New slotted shelf with various binning and divider options
- New tool and small parts drawer modules
- Market-leading shelf loadings
- Expanded range, with more heights, depths and widths
- Two standard colours in stock, with the ability to manufacture four more colours on a quick turnaround
- Compatibility with Dexion's Freetrack and Multi-Bay Compactus systems.

Next up in the range is Ultima CI-180, a two-tier shelving system combining the versatility of Ultima CI-80 with a range of additional components to create either a walkway or a platform two-tier shelving system.

Completing the range is Ultima Longspan, a strong and durable storage system designed to maximise storage capacity, and the European-manufactured Ultima HI-280, a high-density small parts storage system designed for everything from single-level, high density small parts storage through to multi-tier structures.

The Ultima CI-80 range is compatible with Dexion's Freetrack and Multi-Bay Compactus systems, providing customers with reductions in aisle requirements and optimum use of available storage space.

According to Lindsay Plumb, Dexion Australia's product manager, the Ultima Shelving Series provides a foundation on which Dexion can build a complete shelving solution.

"We are marketing Ultima as the ultimate storage system, as it is ideally suited for all industrial and small parts applications, as well as commercial and document storage.

"By simply adding components, we can spec the Ultima system up or down as required by different applications," said Mr Plumb.

"The Ultima range is designed to provide a high quality product at affordable prices. It is also the foundation stone upon which we can build a complete small parts storage solution. In keeping with this, Dexion has also announced product partnerships with BAC Systems, manufacturer of high quality modular drawer systems and AKRO Mills, manufacturer of quality small parts storage bins."

"BAC has long been regarded as the leading manufacturer of high quality modular drawer systems and AKRO Mills is the leading manufacturer of high grade plastic storage products in the US," he said.
