

# Dexion Dynamic Locking Range - Gold

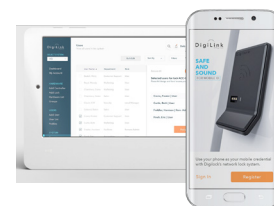

Aspire 6G

Versa 6G

Orbit 6G

Digilink

## Product overview

The Dexion Dynamic Locking Range offers users three distinct levels of locking, each with varying connectivity, security and functionality options. Gold level locking is a networked solution allowing remote management of locks, offering users Keypad, RFID or Mobile ID operation.

Gold Dynamic Locking represents an evolution in Smart Lock Technology. The networked solution lets you remotely manage your facility and users from anywhere whilst maintaining ultimate visibility, responsiveness and reporting.

Facility staff can harness the power of the DIGILINK cloud-based network application for remote management functions such as; programming, user set up and access, Shared or Assigned Use set up and override/unlock. You can also assign an unlimited number of user and manager credentials, schedule auto-unlock, access audit trails and usage data reporting. Existing Silver locks can be upgraded to Gold. RFID locks can often be operated using existing customer RFID credentials. This networked lock solution also avoids the need for expensive additional infrastructure.

## Technical specifications

Lock Type	Battery Powered
Lock Operation	Keypad / RFID / Mobile ID / Remote Management
